PHV859 EQUALIZER® RICOCHET™ PINCHWELD PROTECTION SYSTEM

Protecting the pinchweld when removing the glass has always been a problem for technicians. This kit includes 4 different lengths of a high impact plastic that will absorb repeated striking from the blade, and uses a vacuum hold down tool to exert pressure to keep the pinchweld protector in place. There are many places where this will be useful, but most important are the new vehicles that have no moulding around the glass.

Even a small nick in the paint on those vehicles is easy to see from outside and can result in the need to have that part of the vehicle repainted.

The Ricochet™ Pinchweld Protection System includes 1 x each 300, 450, 600 & 1,200mm (12", 18", 24", & 48") long pinchweld protectors, and 4 x vacuum hold down tools.

PH0813 ONE VACUUM CUP

Replacement Vacuum Cup for Equalizer® Pinchweld Protection System.

NEW

PHS814 REPLACEMENT PINCHWELD PROTECTOR - 300MM (12")

PEL815 REPLACEMENT PINCHWELD PROTECTOR - 450MM (18")

PTF816 REPLACEMENT PINCHWELD PROTECTOR - 600MM (24")

TSP292 TIGHT SPOT™ SET OF 2

Some places, such as parking garages and small parking lots, have vehicles parked close together and it is not always possible to move them to another place. When this happens, you need a set of Tight Spots™. They are made of a piece of dense foam rubber on one side and a soft vacuum cup on the other side. The important thing about the vacuum cup is that it holds the Tight Spot™ in the proper position to prevent damage to either vehicle.
