DF505 SPITZNAGEL MAXI PULLING SYSTEM

The Spitznagel nail pulling system was almost an industry standard tool many years ago which most body shops either had the Spitznagel or a similar system. The Maxi Pulling system is manufactured by the same company "Dent fix" so the reliability is assured and is a step up in technology compared to the original nail puller that has made panel repairs easier for the collision repairer.

THE MAXI is a 220/240 Volt single phase dent pulling station that provides the technician with the power they need to shrink, pull rocker panels, hail damage, creases, dents in hard to access areas and all types of metal damage.

The efficiency of this tool increases the workers productivity while producing a cleaner, better repair. Taking the idea of a stud welder one step further, this versatile tool will:

1. Weld pins
2. Weld a slide hammer directly to the panel
3. Weld a light pulling rod
4. Weld wiggle wire for even crease pulling
5. Weld a rod for leverage pulling
6. Shrink metal

Storage Cabinet:

This essential accessory raises "The Maxi" up to hip level and provides storage space for all the accessories. The Z-brackets on either side of the Stand are perfect for wrapping the cables.

**Supplied with
Storage Cart.**

*(Cart shown
